

# ABSTRACT OF THE DISCLOSURE

5 A method and system for testing cellular network integrity using telematics comprising determining at least one network condition data at a telematics unit, initiating a data call from the telematics unit to a telematics call center, establishing a data call communication channel between the telematics unit and the telematics call center, and transmitting at least one network condition data to the telematics call center via the established data call communication channel. A computer usable medium with suitable computer program code is employed for  
10 testing cellular network integrity using telematics.
